

## UTILIZE 24/7 SYSTEMS MANAGER

### ENSURE SYSTEM UPTIME WITH UTILIZE 24/7 SYSTEMS MANAGER

Utilize's continuous network monitoring software has been specifically developed to benefit your business and give you peace of mind.

Its unique design can not only detect a system failure or irregularity as and when it happens, but it enables us to identify issues long before they get serious and to take proactive measures to fix them - even before your users (or managers) know they've happened.

### SERVER MONITORING MADE EASY

Utilize 24/7 Systems Manager offers complete control by providing a comprehensive range of feature-rich, network monitoring, alerting and diagnostic tools to manage and optimise network performance.

Proactive support by Utilize doesn't get any better than this - spot problems early, show where upgrades are needed and deliver outstanding network performance.

### KEEPING COSTS UNDER CONTROL

Until now proactive network monitoring has been an expensive luxury. But unlike expensive options Utilize's 24/7 Systems Manager provides a high-level solution with an extensive feature set at an affordable price.

It's all part of Utilize's philosophy of keeping IT performance to a maximum while keeping IT costs to a minimum.

SOLUTION

# HOW UTILIZE 24/7 SYSTEMS MANAGER MONITORS THE KEY PARTS OF YOUR SYSTEM - AN OVERVIEW

## ANTI VIRUS UPDATE STATUS

Utilize Systems Manager helps you keep systems safe and secure by monitoring updates of the industry's most well known Anti Virus products. It prevents virus problems consuming huge amounts of down-time in remedial action, data loss or security breaches with a once-a-day check.

## BACKUP SUCCESSFUL

Utilize System Manager backup check monitors your backup software on the days you specify and provides alerts when the backup does, or doesn't, successfully complete. You can rest easy knowing useable data is close to hand in the event of a disaster situation.

## HACKER CHECK

Keep systems secure against unauthorised login attempts with Utilize Systems Manager. The Hacker Check monitors for failed login attempts and alerts if they exceed a specific amount. It provides complete 'peace-of-mind' that business data is safeguarded from theft or malicious use.

## PHYSICAL DISK CHECK & DISK ARRAY STATUS

Hard disk health is a vital aspect of server monitoring and when it starts to fail a disaster is imminent. As part of Utilize Systems Manger the Physical Disk and Disk Array is monitored, alerting Utilize to a deteriorating disk in advance of a catastrophic failure.

## HARD DISK CAPACITY CHECK

With Utilize Systems Manager, proactively monitoring Drive Space Check Utilize can keep on top of available storage space across all disks. For your servers, running out of space and causing business disruption is now a thing of the past.

## PERFORMANCE MONITORING

Server performance monitoring makes it easy for Utilize to stay on top of bottlenecks or issues which could affect the performance of critical business applications and services. Utilize's 24/7 Systems Manager Performance Monitoring Check provides an early warning of emerging outages, so Utilize have time to fine tune or plan upgrades and keep your systems performing as efficiently as possible.

## WINDOWS SERVICE CHECK

The majority of IT network systems are underpinned by Windows Server Systems, providing crucial functions for users, machines and applications network-wide. In order to prevent disruption to your network Windows Service Check monitors, troubleshoots and restarts Windows Services to provide maximum availability for the entire network.

## TCP CHECKS

Utilize 24/7 Systems Manager continuously monitors your email server to ensure that it if it goes down Utilize can find out what went wrong and how to rectify it. It checks that you are receiving emails, that database servers are available and VPN services are accessible to remote users.

## NETWORK MONITORING WITH SNMP/WMI

If you've ever experienced the inconvenience of a power cut, your UPS failing or your servers overheating during the hot summer months then you'll appreciate the Network Monitoring function on Utilize's 24/7 Systems Manager. Using SNMP and WMI Utilize keep a close eye on any SNMP enabled network device, (such as a UPS, power supply units and server temperatures) to report their status and ensure they are working when you need them most.

## BANDWIDTH AND PERFORMANCE MONITORING

Ever wondered why your Internet, network or remote connectivity is slow? Utilize's 24/7 Systems Manager helps identify when and where performance bottlenecks occur on the server or network and supplies bandwidth and performance monitoring history reports. Not only do these reports help you maximise availability of your network, they also help you and Utilize to identify vital performance upgrades.

## TREND SPOTTING & REPORTING

Utilize's 24/7 Systems Manager reporting tools produce comprehensive, graphical reports that Utilize can use to spot trends in your system's performance. It also makes Utilize aware of the need for any potential fixes, upgrades or replacements as hardware starts to become retired.
